IT SUPPORT & AMC SERVICES

Whether it is for undertaking the complete structural cabling or installing high-end surveillance and security solutions for business organizations and institutions alike, we excel in offering only the best. Depending on the specific needs and requirements of our clients, we propose and install the individualized solutions that best suit their business needs. Hence, we strive to impart a service based on high quality to our wide range of clientele and in the process, make their businesses easy. Within a short period, we have carved a niche for ourselves in the highly competitive IT hardware, networking, and communications market. Tending to every industrial sector, including large corporate, small and medium enterprises, healthcare as well as educational institutions, we extend our services ranging from comprehensive wiring and cabling solutions to high-end data security and from super reliable video conferencing systems to the highly valued IT support and consultancy.

STRUCTURED CABLING

Our structured cabling system aims at increasing flexibility, improving performance and promoting corporate development. We handle transfers, additions, and modifications quickly and simply, reducing installation time and ensuring maximum flexibility to any network infrastructure changes. The system's versatility also makes it simple to disassemble and relocate to a new workplace location. In UAE, there are a set of standards that govern the design and installation of Structured Cabling systems that specify the wiring of data centres, offices, and apartment buildings for data and voice communications, surveillance, public address systems etc. The wiring is achieved using different kinds of certified copper and fibre optic cables, modular connectors etc. We plan ahead and integrate vital facets such as bandwidth consideration, crosstalk, and cable conformance, among other important factors like fire protection and cable management which are often overlooked.ELV has been our area of expertise since our start, and as a result, we have acquired a proud industry-leading position in supplying great services for all sorts of extra-low voltage services.

IT INFRASTRUCTURE SOLUTIONS

In today's world, Information Technology is a critical factor for business performance affecting every element of the business processes. We think that IT infrastructure installation and management is a continuous process that runs when your business needs it, in order to operate smoothly, rather than a one-time event. In addition to this, the IT infrastructure architecture must be flexible and adaptive to able to effectively handle emerging technologies such as cloud, mobility & analytics and adapt to changing business demands and opportunities.

We at Appsline, the fastest growing IT Infrastructure Solution Providers, have been consistently delivering in-depth customized, and versatile IT Infrastructure Solutions. Efficient infrastructure management may reduce or eliminate downtime, providing business owners and users with a versatile and powerful tool for safeguarding the performance of their critical business activities.

VIDEO SURVEILLANCE SYSTEM

With the rise of the Internet of Things(IoT), video surveillance based on Internet Protocol(IP) has allowed us to monitor and control the security of the premises even using a smartphone. We are on the way to becoming the leading supplier of IP-based video surveillance in the UAE with our unique security solutions that cover every aspect of physical and cyber security. Scalability, adaptability, and cost-effectiveness are some of the countless advantages of our IP-based video surveillance.

Users may watch and monitor video remotely utilizing an IP network as the system's backbone using an IP-based video surveillance setup. The best part about our video surveillance system is that it can easily be integrated with the existing surveillance systems such as Automated License Plate Recognition (ALPR) and Facial Recognition systems, among many others.

IP -PBX & UNIFIED COMMUNICATION SERVER SOLUTION

A Private Branch Exchange or PBX is an internal telephone network used primarily on-premises. When PBXs first came out, the only type of electronic communication available was wireline phone calls. With recent technological advancements, we are having a plethora of options for communication purposes including video conferencing, email, instant messaging chats, remote desktop sharing, mobile telephony, SMS, etc. Hence communication is not limited to on-premise servers and had to be taken online to Internet Protocol(IP) based PBX cloud servers. Appsline has been the leading provider of secure IP PBX with scalable solutions for the future. Increasing flexible work environments, competitiveness, and shifting schedules need the development of more collaborative communication solutions for in-office and mobile workforces. The phrase "Unified Communication" has been inculcated in our solutions as a result of the importance of collaboration and mobility in corporate communications.

PUBLIC ADDRESSING SYSTEMS

A public Address System is an electronic sound amplification and distribution system with a microphone, amplifier, and loudspeakers. Public Address Systems, as the name suggests, is used to address large gatherings and deliver mass communications through a centralized control room. Our robust PA systems comprise amplifiers, microphones, loudspeakers, and related equipment from the top manufacturers in the world to maintain the level of expectation our esteemed clients have from Appsline. We firmly believe that a public address and emergency sound system must provide great performance and dependability to be truly successful. We provide and install reliable emergency warning and notification systems for hospitals, campuses, communities, industrial and other markets. We have efficiently delivered PA systems and components for several recognized corporate offices and even small-scale outlets in the UAE and India.

ACCESS CONTROL AND TIME ATTENDANCE SOLUTIONS

Access Control Solutions enable you to authorize, monitor, report on, and manage building access for the employees as well as visitors. We integrate with a wide range of hardware alternatives to provide a robust integrated approach to facility management and security. Our Access control solutions are extremely versatile, allowing you to control both individuals entering and/or departing your premises, as well as controlled access to specific areas inside your building/premises to boost security and keep intruders out. Smart card readers, RFID, Biometric (Facial, Finger, or Hand), Mifare, Bar Code, Magnetic Stripe, and Proximity sensors are among the access management technologies we offer at Appsline. The increased need for transparency, accountability, and flexible work culture has culminated in the invention of a failsafe system to achieve an increase in productivity.

IT SUPPORT & AMC SERVICES

Appsline is proud to be regarded as one of the best all-around IT support solutions in the UAE and strives hard to exceed the expectations of our customers. Our passionate team of experienced professionals is always available at your beck and call to cater to any and all IT-related needs of your organization. Our AMC(annual maintenance contract) is an efficient way to keep your business running smoothly by ensuring that all your IT-related equipment and software are updated and maintained. Maintenance is essential in order to obtain the same performance out of machines, computers, and other devices. Unless regularly inspected, there is always the risk of an unprecedented failure in an organization's communications or IT infrastructure. It is possible to significantly decrease risk with the use of our Annual Maintenance Contract (AMC) which ensures your clients get the best glitch-free service possible.

PIRATED SOFTWARE DOES MORE HARM THAN GOOD

Any free or pirated software comes with a compromise of some kind. The pirated software we get online is generally a threat to our important or sensitive data which may invariably be accessible to hackers or other malicious threats. Optimally you should always have licensed software and genuine endpoint security on your computers. This ensures your computers are always protected and less vulnerable to new-age threats. When you have genuine software, you get regular security updates or patches, on-call support, no annoying activation notifications, and full feature access.

CUSTOMER-FIRST, NOW AND ALWAYS. OUR SUCCESS IS MUTUAL!

Appsline has a tradition of keeping the customer in mind for everything we do. This is the core of what the company is about. We know that only by keeping our customers satisfied would we be doing justice to ourselves. Our entire team is trained on putting the customer first and ensuring their delight always! At Appsline, you can rest assured that all your requirements are our priorities and your success is the wind in our wings.

CUSTOMER TRUST

Appsline has always prided itself on being the vendor of choice for all who prefer quality above else. Our business strategy itself is aligned in such a way that the customer is guided through every aspect of our products and services. There is proper training given to ensure that the client's learning curve is short and smooth. We are proud to say that our customers place their trust in us and expect the best from Appsline. We at Appsline will always strive to make sure that we exceed the expectations of our customers. Customer satisfaction is our first priority, period!
